

Gautam Kumar

FULL STACK DEVELOPER

Bengaluru, India | gautam.aec18@gmail.com | +91 9631636391 | github.com/gk2work

Professional Summary

Full Stack Developer with extensive experience building scalable web applications, RESTful APIs, and LLM-powered features. Skilled across the full stack with React, Angular, Node.js, Python, and MongoDB. Proven track record of architecting digital products from scratch, integrating AI and OCR pipelines, and deploying reliable, low-latency backend services in agile environments.

Professional Experience

ViaCerta

Remote

Full Stack Developer

April 2026–Present

- Building core web applications and digital products from scratch using React for the frontend and Python for backend services.
- Architecting server-side operations, RESTful APIs, and database schemas to establish scalable tech infrastructure for new product launches.
- Collaborating directly with the founder and product leadership to plan technology roadmaps, system setup, and feature implementation.
- Overseeing deployment setup, third-party API integrations, performance optimization, and ongoing technical maintenance.

ForeignAdmits

Bengaluru, India

Software Development Engineer (SDE-1), Full Stack & AI Platform

Feb 2025–Feb 2026

- Co-developed "Course Finder", a full-stack study abroad platform using Node.js for the backend and Angular for the frontend, allowing students to search, filter, and shortlist university courses based on their profile.
- Built a Semantic Course Discovery search and shortlisting feature that matches university programs to student profiles, giving more relevant results than standard keyword search.
- Shipped an LLM-powered study-abroad chatbot end to end, owning prompt design, intent handling, and backend orchestration to automate first-line student support.
- Grounded chatbot answers in internal admissions data, replacing generic LLM output with verified university, course, and eligibility information to reduce incorrect responses.
- Built AI-assisted document-processing workflows that extract structured student and academic data from applications, IDs, and forms, removing hours of manual data entry per intake batch.
- Integrated OCR pipelines with backend validation and normalization, enforcing consistency checks that made high-volume ingestion reliable across multiple document formats.
- Designed and scaled backend services in Node.js, Express.js, and MongoDB, exposing REST APIs that serve real-time queries over high-volume admissions data.
- Secured the platform with RBAC and API authentication, giving counselors, operations, and internal stakeholders scoped access to AI-enabled tools.
- Optimized APIs and database queries through pagination, filtering, and indexing to keep dashboards and search responses low-latency under production load.
- Released new features in agile sprints using sprint planning, code reviews, and Git-based workflows for stable, repeatable production deployments.

UEntrée

Bengaluru, India

Software Development Engineer (SDE-1)

Jun 2023–Jan 2025

- Developed and maintained scalable web application features.
- Designed RESTful APIs, optimized database queries, and implemented user authentication workflows.
- Collaborated in agile sprints, participating in code reviews, bug fixes, and continuous product deployments.

Selected Work

Course Finder: Co-developed a full-stack study abroad platform using Node.js for the backend and Angular for the frontend, allowing students to search, filter, and shortlist university courses based on their profile.

Semantic Course Discovery: Built a search and shortlisting feature that matches university programs to student profiles, giving more relevant results than standard keyword search.

Conversational Admissions Assistant: Developed a chatbot to handle common student queries using structured prompts and intent routing, with a fallback to human counselors when needed.

Document Intelligence Pipeline: Built a document processing service that extracts and structures data from student application forms and IDs, reducing manual data entry for the admissions team.

Technical Skills

Languages: JavaScript, TypeScript, Python, SQL

Frontend: React.js, Angular, HTML, CSS

AI/LLM: LLM app development, prompt engineering, RAG & semantic search, OCR / document extraction, MCP & agent fundamentals

Backend: Node.js, Express.js, FastAPI, REST APIs, WebSockets, Authentication & RBAC

Data: MongoDB, SQL, schema design, query optimization

Cloud / DevOps: AWS (ECS, S3), Docker, CI/CD, Git, GitHub

Tools & Practices: Postman, Jira, Agile/Scrum, Code Review, Data Structures

Professional Training

Coding Ninjas

Full Stack Web Development

Jun 2023–Feb 2024

Built production-style React frontends and Node.js/Express backends with MongoDB and SQL; implemented REST APIs, authentication flows, and Git/GitHub collaborative workflows.

Education

Asansol Engineering College

B.Tech in Electronics & Communication Engineering, CGPA: 7.70 / 10

Asansol, India

2014–2018

Certifications & Awards

- Fundamentals of MCP, Hugging Face
- Agents Fundamentals, Hugging Face
- Participation Certificate, Joint Faculty Development Programme on Classical ML, Electronics and ICT Academy, IIT Guwahati, supported by MeitY, Govt. of India (May 2026)
